

**MAN Truck & Bus AG** in Munich is looking in the field of **Procurement/Purchasing** starting as soon as possible for a

## Intern (m/f) Project Purchasing - Metal & Rolling Chassis

### Your tasks

As a fully integrated member of our young and aspiring team you will handle the following tasks:

- Alignment with other business units within MAN (project management, engineering, quality assurance, controlling, logistics, sales) regarding the requirements towards our suppliers
- Preparation and tracking of supplier enquiries
- Composition of negotiation briefings and participation on supplier negotiations
- Analysis and evaluation of supplier offers
- Compilation of internal decision templates for supplier nominations

### Your profile

In order to leverage your skills effectively and take the most for you from this internship you should provide the following requirements:

- You are currently enrolled in studies of Business Administration, Management, Economics or Industrial Engineering
- You are fluent in English. Additionally, fluency in German is a plus
- You are open to work in an intercultural framework
- You are communicative, friendly and determined in the interaction with diverse stakeholders.
- You work in a structured, cooperative and entrepreneurial manner.
- You provide a solid command of the MS-Office Suite and the readiness to work in additional IT-solutions
- Previous internships are a plus

### Additional information

We provide the option to write a Bachelor or Master theses after your internship with our department.

The department **Project Purchasing - Metal & Rolling Chassis** is responsible for purchasing related issues throughout the development and ramp-up phase of new truck and bus projects. In this context we are conducting negotiations with (development-) suppliers on changed requirements as well as the introduction of innovations until the product launch. Furthermore, we ensure the timely availability of prototypes and series parts for their respective start of production. The scope we are covering includes steering and braking systems for assisted driving solutions, modern exhaust systems needed to optimize the environmental footprint of our trucks and buses as well as design-shaping sheet metal parts. In this context we pursue a close collaboration with our sister brands from Volkswagen Group like e.g. Scania and Volkswagen Commercial Vehicles.
